Serial No. 10/699,111
April 20, 2006
Page 4

20. (currently amended) A trailer hanger comprising:

a one-piece, monolithic hanger body defined from a single aluminum extrusion, said wherein the hanger body comprises comprising: (i) a swing arm attachment portion defined by an outboard wall, an inboard wall spaced from the outboard wall, a back wall arranged transverse to and interconnecting the outboard and inboard walls; and (ii) a shock absorber attachment bracket portion defined by a first wall, a second wall spaced from the first wall, and a third wall arranged transverse to and interconnecting the first and second walls.

21. (canceled)

22. (currently amended) The trailer hanger of ~~claim 21~~ claim 20, wherein the outboard wall and the inboard wall of the hanger body further comprises a pair of include respective alignment guides formed therein and arranged generally parallel to and spaced from each other to provide adjustable axle alignment.

23. (currently amended) The trailer hanger of ~~claim 21~~ claim 20, further comprising a trailer attachment plate welded to the hanger, said trailer attachment plate defining a plurality of apertures for attachment of the trailer attachment plate to the an associated trailer frame member.

24. (previously presented) The trailer hanger of claim 23, wherein the trailer attachment plate comprises an aluminum extrusion.

Page 5

25. (previously presented) The trailer hanger of claim 24, wherein the trailer attachment plate comprises an attachment side for abutting with the associated trailer frame member and an opposite non-attachment side, said non-attachment side comprising a strengthening flange extending outwardly therefrom.

26. (currently amended) ~~The trailer hanger of claim 20,~~ A trailer hanger comprising:

a monolithic hanger body wherein the hanger body comprises a swing arm attachment portion and a shock absorber attachment portion, wherein:

said swing arm attachment portion comprises an outboard wall, an inboard wall parallel to the outboard wall, a back wall arranged transverse to and interconnecting the outboard and inboard walls, said outboard and inboard walls each defining a swing arm attachment aperture for attachment of an associated swing arm between the outboard and inboard walls; and,

said shock absorber attachment bracket portion comprises a first wall, a second wall parallel to the first wall, and a third wall arranged transverse to and interconnecting the first and second walls, said first and second walls each defining a shock absorber attachment aperture for attachment of an associated shock absorber between the first and second walls.

27. (previously presented) The trailer hanger of claim 26, wherein said first wall of said shock absorber attachment bracket portion is defined by part of said inboard wall of said swing arm attachment portion.

28. (previously presented) The trailer hanger of claim 27, wherein said trailer hanger comprises an aluminum extrusion.

29. (canceled)

30. (canceled)

31. (previously presented) The trailer hanger of claim 26, wherein said monolithic hanger body, including said outboard wall, said inboard wall, said back wall, said first wall, said second wall, and said third wall, is defined by an aluminum extrusion.

32. (previously presented) The trailer hanger of claim 31, wherein said first wall of said shock absorber attachment bracket portion is connected to and extends from said inboard wall of said swing arm attachment portion.
